

ADD-A-LUBE™

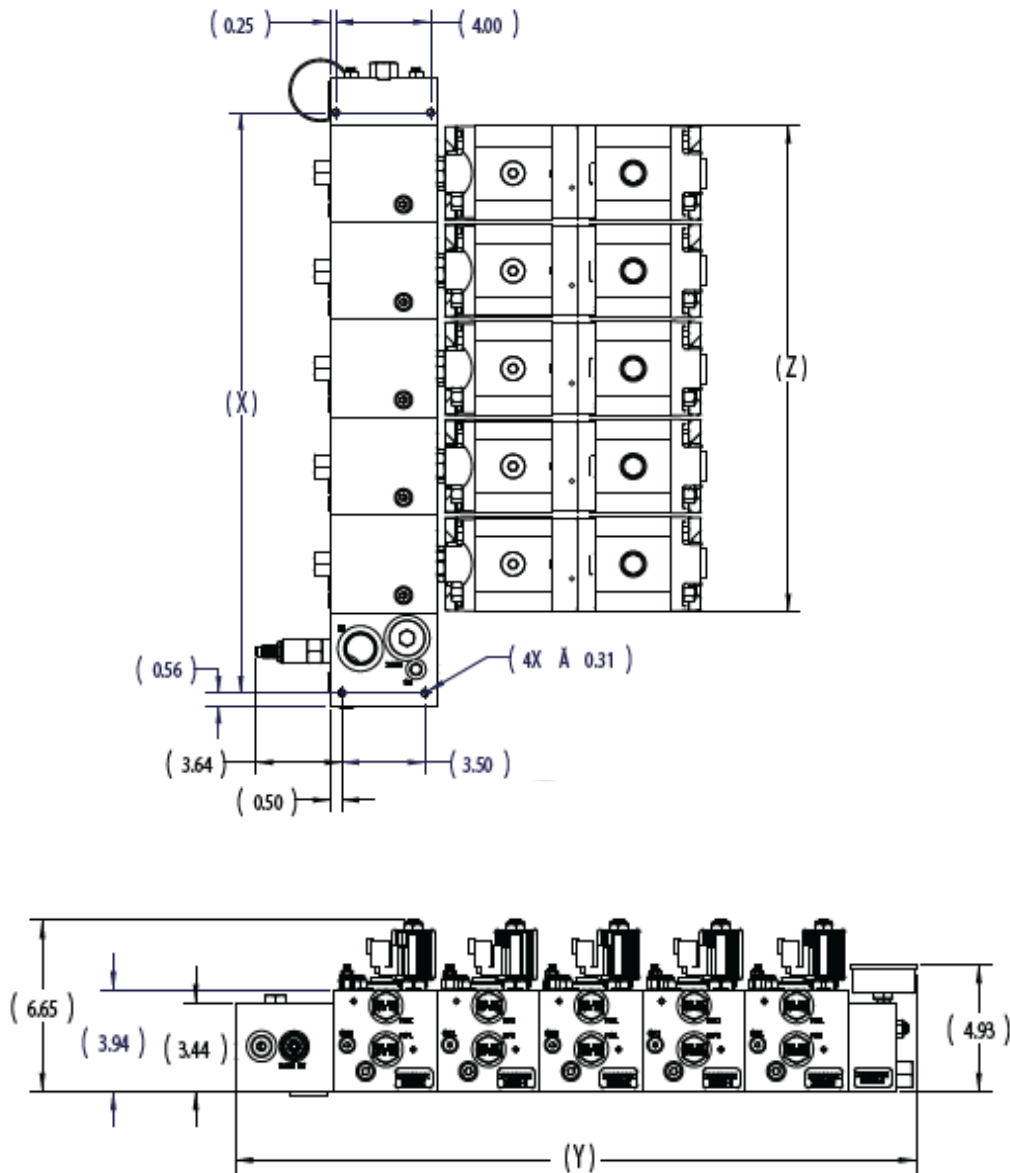

The Add-A-Lube valve system allows you to quickly configure your Lube Trucks with a compact, high performance lubrication delivery system. Able to accommodate both load sense and open center circuits this solution also provides individual section electric on/off, flow control and pressure limiting capability to tailor to each lubricant circuit's needs.

FEATURES

- ✓ Inlet Flows Up to 30 GPM
- ✓ Inlet Operating Pressures to 3500 PSI
- ✓ Manifold Mounted Valve Sections and Pump/Motor Units
 - ▶ Unsurpassed serviceability of both valve sections and pump/motor units
 - ▶ Eliminates need to install and plumb separate control valve saving installation time and components
- ✓ Modular Sub-Base Design with Many Valve Options
 - ▶ Provides unlimited configuration with optional pressure limiting, flow control, proportional solenoids and optional manual overrides
 - ▶ Standard compensated sections ensures flow is shared between the circuits evenly
- ✓ Compact Space Saving Design Accommodating up to five Product Pumps
 - ▶ Minimizes the installation space required and reduces overall weight of assembly.
- ✓ Parker PGP511 Product Pump/Motor Combinations
 - ▶ High performance and high quality with dual shaft seals to prevent contamination between hydraulic system and product fluid
 - ▶ Multiple pump and motor sizes available including varying pump/motor size ratios for increased product pump delivery flows
- ✓ Optional 2-Way Valves Sections
 - ▶ Add additional valves sections to control remote auxiliary functions or additional product pumps
- ✓ Gear Pump or Load-Sensing Versions Available
 - ▶ Power Beyond optional with Gear Pump version
- ✓ Level Ports All Exit on the Bottom Side
