

# Retro-Fitting Upgrade

Our next generation SSC6100 control system is the industry-leading integrated CANBUS joystick and spreader controller. Embedded within the 10" color touchscreen, this controller comes fully equipped with camera integration and PreCise® MRM cellular and GPS technologies. Customers are able to continue using the existing joysticks, so this quick upgrade is usually completed in 3 easy steps with no need to touch anything outside of the cab.

1.) Unplug connectors & remove core module.

2.) Connect retrofit harness & mount hub using supplied adapter bracket.

3.) Remove old screen & install the new one onto the existing RAM mount.

## SSC6100 Features

Upgrade to FORCE® America's 6100 control system to take advantage of the numerous technological advancements it offers that were not available on our older controllers.

- High-Resolution 10" Color LCD Touch Screen
- Rapid System Start-up
- External Camera Integration
- Built-in GPS Capabilities
- Integrated with PreCise MRM
- PreCise MRM Arc Wireless Air & Road Condition Systems are Supported

## Why Now ?

FORCE America's next generation SSC6100 control system is our most current and in-demand controller. To help make this transition, we are offering an upgrade package so you can:

- Standardize your fleet to all use the same controller
- Refresh older equipment
- Upgrade during the off-season to be prepared for the first storm
